Important structures such as bridges, transport structures, pressure equipment in the power industry, energy structures, ... require continuous monitoring of their health and integrity due to their cost and importance in the infrastructures of countries.

Abstracts are solicited from the community in the following and related areas:

- Development of in-service monitoring systems for major structures
- Data management in measurement and data transmission and conditioning
- Experimental and diagnostic techniques for long-term monitoring under operating conditions of structures
- Stability of sensors and electronic components under long-term operating conditions
- Stability of sensors and electronic components in long-term operation
- Case studies of monitoring system applications
